

## **ALLOWANCE**

### ***Allowable Subject Matter***

1. Claims 1-3, 8 and 9 are allowed.

The closest prior art is considered to be Niira, Karnari and Myers as set forth in the Office Action dated 11/13/2009. As argued by the applicant in the Pre-Conference Request dated 01/13/2010, the disclosure of Myers in paragraphs 0081 and 0082 stating the amount of metal can be varied over a wide range is specific only the metal in the zeolite, not the metal oxide in the antibiotic material. The amount of silver at most can be 20% in the zeolite, and there is no suggestion that the amount of silver oxide can be as high as 60%. As such, one of ordinary skill in the art would not have been motivated to modify Niira such that the silver based antibiotic substance contains 60-80% of an oxide of silver ions, 10-20% zinc oxide and 10-20% zirconium phosphate.
